Semangka varietas BT 2 berumur genjah, dapat dipanen pada umur 75-80 hari atau 30-35 hari setelah persarian. Bobot buah 6,5-7 kg, kulit tipis kurang 1 cm, warna daging buah kuning, tekstur buah renyah.

Semangka hibrida ini diharapkan menjadi pilihan bagi petani dalam mengembangkan semangka. Ditinjau dari keunggulannya, varietas semangka hibrida ini prospektif dikembangkan dalam skala luas.

*The BT 2 is an early maturing variety which can be harvested at 75-80 days after planting or 30-35 days after flowering. Fruit weight is 6.5-7 kg, approximately less than 1 cm skin thickness, yellow flesh color, and crispy fruit texture.*

*This variety is expected to be an option for farmers who grow watermelons in addition to its potential to be grown on a large scale.*
