Kentang Varietas Repita *Repita Potato Variety*

Inventor : Kusmana, E. Sofiari, dan Rofi S. B.
Balai Penelitian Tanaman Sayuran
Indonesian Vegetables Research Institute

Status Perlindungan IHK : Pendaftaran Varietas No. 20/PVTIP/2008
IPR Protection Status : Variety Registration No. 020/PVTIP/2008

Kentang varietas Repita memiliki tipe tumbuh tegak, tinggi tanaman 80-90 cm, umur panen 90-100 hari, bentuk umbi bulat, warna kulit umbi krem, warna daging umbi putih agak krem, mata umbi berlekuk sedang, dan potensi hasil 30-32 ton per hektar. Varietas ini mengandung gula reduksi 0,039° Brix.

Varietas Repita cocok sebagai kentang sayur, tahan penyakit busuk daun, dan beradaptasi baik pada dataran tinggi di atas 1.000 m dpl.

The Repita potato variety has an upright growth type, with plant height of 80-90 cm, and is ready to be harvested in 90-100 days after planting. It has a round tuber shape with creamy skin color and creamy white flesh. The tuber eyes are notched, and the variety has a yield potential of 30-32 tons per hectare. This variety contains sugar reduction 0.039° Brix.

The Repita potato variety is suitable for vegetable potato, is resistant to late blight, and adapts well at the altitude of 1,000 m above sea level.
