Kelapa Kopyor Varietas Genjah Kuning *Yellow Early Maturity Kopyor Coconut Variety*

Inventor : Ismail Maskromo, Elsie T. Tenda,
Meity Tulalo, Hengky Novarianto, dan Bambang Heliyanto
Balai Penelitian Tanaman Palma
Indonesian Palm Crops Research Institute
Status Perlindungan HKI : Pendaftaran Varietas No.20/PVL/2007
IPR Protection Status : Variety Registration No. 20/PVLP/2007

Kelapa kopyor varietas Genjah Kuning beradaptasi luas pada lahan kering beriklim basah dengan ketinggian lokasi hingga 300 m dpl. Lingkaran polar buah 52 cm, lingkaran ekuatorial 42 cm, dan kadar minyak 9,2% bobot basah.

Varietas unggul ini dapat dipanen sejak berumur 48 bulan, bobot buah utuh rata-rata 1,2 kg, jumlah buah per pohon 100-120 butir atau 1.300 butir per hektar per tahun, ukuran buah sedang.

Varietas kelapa kopyor ini diminati oleh konsumen dan permintaannya cukup tinggi. Kelapa kopyor varietas Genjah Kuning prospektif dikembangkan secara komersial di daerah wisata.

The yellow early maturity kopyor coconut variety is widely adapted to dry areas with an altitude up to 300 m above sea level. Circle size of the fruit is 52 cm and round size is 42 cm.

The oil content is 9.2% wet weight. The fruit can be harvested when the plant is about 48 months old. Number of fruit per tree is around 100-120, or approximately 1,300 fruit of medium size per hectare per year.

An average weight of individual fruit is 1.2 kg. Demand for this kopyor coconut type is high. This yellow early maturity kopyor coconut variety is appropriate to be developed commercially in a tourist area.
