Mangga Varietas Garifta Merah

Garifta Merah Mango Variety

Inventor : Rebin, Lukitariati S., Nur Hadi, Mizu I., Endriyanto, Samad, dan Ucu R
Balai Penelitian Tanaman Buah Tropika
Indonesian Tropical Fruits Research Institute

Status Perlindungan HKI : Pendaftaran Varietas No. 13/PVHP/2010
IPR Protection Status : Variety Registration No. 13/PVHP/2010

Penampilan buah mangga varietas Garifta Merah menarik dengan warna kulit kemerahan. Produktivitas buah rata-rata 62 kg per pohon per tahun. Daging buah berwarna kuning kemerahan, bentuk buah jorong dengan panjang 14–16,5 cm, permukaan kulit buah halus, tekstur daging agak lunak berserat halus. Rasa buah manis segar dan aroma harum kuat. Bobot buah berkisar antara 220-320 gram.

Mangga unggul ini dapat beradaptasi baik pada dataran rendah sampai ketinggian tempat 400 m dpl. Buah memiliki kandungan air 83–86%, vitamin C 45,5 mg per 100 gram, gula 15,5 °brix, dan asam 0,21%.

Varietas unggul ini potensial dikembangkan secara komersial karena warna buah yang eksotik dan rasanya manis segar.

The Garifta Merah variety has an attractive appearance with reddish skin color. It yields 62 kg per tree per year. The color of the fruit flesh is reddish yellow and the fruit shape is oblong with a length of 14 to 16.5 cm. The surface of the fruit skin is smooth and the texture of the flesh is soft with a rather subtle fiber content. The taste of the flesh is sweet combined with a quite strong aroma. The fruit weight ranges between 220-320 grams.

This superior mango can adapt well in the low elevation areas up to 400 m asl. The fruit has a water content of 83-86%, 45.5 mg per 100 grams vitamin C, 15.5° brix sugar, and 0.21% acid.

This improved variety has a potential to be grown commercially because of its exotic fruits and fresh sweet taste.
