Anggrek dendrobium varietas Balithi CF022 23 memiliki bunga dengan panjang 5,1-5,3 cm, lebar 5,7-5,9 cm, posisi pembungaan di ujung pseudolub, dan arah menghadap bunga ke dua arah. Ukuran tangkai bunga panjang 47-51 cm, jumlah bunga 7-13 kuntum per tangkai, masa segar bunga 3 bulan, produksi bunga 1-3 tangkai per pseudolub per tahun. Penciri utama varietas ini adalah mahkota dan bibir bunga berwarna pink tua cerah, posisi bibir horisontal, dan warna calli terlihat jelas berbeda.

Varietas ini memiliki tekstur helaian bunga yang tebal, warna merata, masa segar relatif lebih lama setelah dipotong, dapat dikembangkan secara komersial pada daerah dengan ketinggian 150-1.100 m dpl.

The Balithi CF022 23 variety has flowers with a length of 5.1 to 5.3 cm and 5.7 to 5.9 cm wide. Flowering position is at the edge of pseudolub, and flowers are facing in two directions. The stalk is 47-51 cm long, and number of flowers is 7-13 buds per stalk, flower remains fresh for 3 month period, and it produces 1-3 stalks per pseudolub per year. The main feature of this variety is the bright deep pink crown and lips of the flowers, horizontal lip position, and clearly visible difference of calli colors.

This variety has the texture of thick strands of flowers, evenly colored, relatively fresh for a longer period after cutting and can be developed commercially in areas with an altitude of 150-1100 m above sea level.
