Kedelai Varietas Dering 1 *Dering 1 Soybean Variety*

Inventor : Suhartina, Purwantoro, Novita Nugrahaeni,
Suyanto, Arifin, dan M. Muchlish Adie
Balai Penelitian Tanaman Aneka Kacang dan Umbi
Indonesian Legumes and Tuber Crops Research Institute
Status Perlindungan HKI : 166/PVHIP/2013
IPR Protection Status : Variety Registration No. 166/PVHIP/2013

Varietas unggul Dering 1 toleran kekeringan selama fase reproduktif pada kedalaman tanah 0-20 cm. Selama pengujian, varietas Dering 1 dalam kondisi relatif kekeringan mampu memberi hasil 2,83 ton per hektar, umur masak 81 hari, dan bobot biji 10,7 gram per 100 biji, tahan hama penggerek polong dan penyakit karat daun. Varietas Dering 1 sesuai ditanam di lahan sawah pada MK I dan MK II, serta lahan tegal pada MK I atau lahan dengan irigasi terbatas.

Penanaman varietas toleran kekeringan merupakan salah satu strategi dalam mengantisipasi dampak perubahan iklim.

Dering 1 is a drought tolerant variety during the reproductive phase at 0-20 cm soil depth. During testing, Dering 1 was able to yield 2.83 tons per hectare under relatively droughty conditions. It can be harvested in 81 days, grain weight is 10.7 grams per 100 grains, and it is resistant to pod borer and rust disease.

This variety is suitable to be grown in the first and second dry season of lowland areas as well as in the dry season of upland or rainfed lowland areas.
